Churn Risk Flagging

A CS team learns an account is leaving only when it tells them it is not renewing

3–4 focused hours	1 week calendar time	30–45 min live defense

The Customer & The Ask

CASE STUDY 3

VANTAGE RETAIL SYSTEMS

Sells inventory-management software to mid-size
Weekly login counts are tracked per account.

“ We only find out an account is about to churn when they tell us they’ re not renewing — by then it’ s way too late to do anything about it. We track weekly login counts per account.

I’d love something that looks at that usage data and flags accounts that seem to be trending down, early enough that our CS team can actually reach out and try to save the relationship. I don’t have a precise definition of ‘at risk’ — that’s part of what I’m hoping you can help figure out.”

— Dana Reyes, Head of Customer Success

THE ASK IS DELIBERATELY

You decide — and document — how much decline over what period counts as “ at much history makes a trend meaningful, to do with accounts too new to have any.

WHAT WE'RE EVALUATING

- Handling ambiguity
- Soundness of design judgment
- Building under real constraints
- Clarity of your reasoning
- Response when challenged

Provided: synthetic weekly login history for 8 and a starter repo.
